

CareTrace Final Project :Deliverables

1. Working System + Demo

- End-to-end CareTrace system
- Multi-turn interaction (stateful)
- Demonstrate at least:
 - base scenario
 - one extended scenario (medication or local context)

2. Final Report (concise, ~5–8 pages)

Must include:

- **Architecture (very clear)**
 - how neural + KG + rules interact
- **KG design**
 - what concepts included and why
- **Rule design**
 - key rules + escalation logic
- **System behavior**
 - example runs (with explanation)
- **Evaluation**
 - confidence / trust
 - actionability
 - safety
 - comparison vs baseline
- **Extra investigation (one)**
 - what you tested
 - what you found

3. Final Presentation

- **30 min talk + 15 min Q&A**
- Must show:
 - system working live or recorded
 - one scenario walkthrough
 - one failure or limitation

4. Group + Individual Contribution

- Group submission overall
- Each member submits:
 - **short contribution note (½ page)**
 - what they owned (KG / hybrid / rules / evaluation)

Grading (Total 60 pts)

1. Safety & Correctness (10 pts)

Full (10 pts)

- Correct escalation decisions; no missed critical cases
- Clear, explicit escalation triggers

Partial (6-8 pts)

- Mostly correct decisions; minor issues
- Some triggers unclear or incomplete

Minimal (0-5 pts)

- Incorrect or unsafe decisions
- Missing or vague escalation triggers

2. Confidence & Trustworthiness (10 pts)

Full (10 pts)

- Consistent across turns
- Clearly grounded in KG / guidelines

Partial (6-8 pts)

- Some inconsistencies or weak grounding

Minimal (0-5 pts)

- Contradictions or ungrounded responses

3. Actionability (5 pts)

Full (5 pts)

- Clear steps (what to do now)
- Explicit monitoring + escalation conditions

Partial (3-4 pts)

- Steps present but incomplete or vague

Minimal (0-2 pts)

- Generic advice; not actionable

4. Neurosymbolic Design (10 pts)

Full (10 pts)

- KG is relevant and well-designed
- State + retrieval used appropriately
- Rules correctly control decisions

Partial (4-6 pts)

- Some components present but weak integration

Minimal (0-3 pts)

- Missing or poorly implemented neurosymbolic components

5. Transparency & Traceability (5 pts)

Full (5 pts)

- Clear: state → rule → decision

Partial (3-4 pts)

- Partial traceability

Minimal (0-2 pts)

- Cannot explain decision path

6. Working System & Demo & Evaluation(10 pts)

Full (10 pts)

- End-to-end system works
- Demo clearly shows functionality
- Clear comparison with baseline LLM and good insights

Partial (6-8 pts)

- Partially working or unclear demo
- Limited insights from evaluation

Minimal (0-5 pts)

- System incomplete or not demonstrated

7. Extra Investigation (10 pts)

Full (10 pts)

- Clear setup + meaningful findings

Partial (6–9 pts)

- Attempt made but shallow

Minimal (0–4 pts)

- Missing or unclear
